

FastCalc lite

User Manual

FastCalc lite 2.1

1 Introduction

FastCalc lite is a calculator recognized for its efficiency and ease of use.

It stands out thanks to:

- its large keys, which allow for fast and accurate input,
- the permanent display of the expression entered by the user,
- the automatic display of the result while typing: no “=” key required!

FastCalc lite is thus a simple and efficient calculator, ideal for everyday calculations.

BASICS OF USE

The interface of FastCalc lite is innovative and minimalist, entirely based on simple gestures:

- Select a side symbol on a key: slide your finger in its direction.
- Delete the last entered elements: make a small swipe to the left on the display.
- Clear the entire expression: swipe quickly to the left across the whole display.
-

FEATURES

- Large, practical, and easy-to-read keys.
- Permanent display of the current expression.
- Integrated help videos and user guide (in ⓘ).

2 Basic operations

2.1 Select a symbol

The FastCalc lite keypad displays selectable and non-selectable symbols using two distinct colors, with the symbols being updated as the expression is entered.

To select a side symbol, slide your finger in its direction on the corresponding key of the FastCalc lite keypad.

2.2 Clear one symbol

To delete the last entered symbol, make a small swipe to the left on the expression display. To progressively clear the expression, slowly slide your finger to the left. On iPad or iPhone Max, you can also select the  symbol on the keypad.

2.3 Clear the entire expression

1. Quickly slide your finger to the left across the entire display.

On iPad or iPhone Max, you can also select the  symbol on the keypad.

2. If the confirmation button **Clear expression** appears, tap it.

2.4 Copy

You can display the copy menu on the following elements with a double tap:

1. The result.
2. The expression. In this case, the expression and its result will be copied to the clipboard.

ATTENTION

You can copy an expression only if it produces a result.

2.5 Paste

You can paste a number into the expression if it allows it.
